

This example shows you how to separate the source and output boxes by injecting the kframe environments between them.

```
library(knitr)
# modify the default chunk hook
hook_chunk = knit_hooks$get('chunk')
knit_hooks$set(chunk = function(x, options) {
  out = hook_chunk(x, options)
  gsub('(\\\\\\\\end\\\\\\{alltt\\\\\\})\\\\\\s*(\\\\\\\\\\\\begin\\\\\\{verbatim\\\\\\})',
    '\\\\1\\\\\\\\end{kframe}\\\\\\\\\\\\begin{kframe}\\\\\\2', out)
})
```

It is a hackish solution...

```
summary(cars)
```
